

## Approved PV panel products and installers

In order to qualify to receive the Government's incentives (Feed In Tariffs known as FITs) homeowners must use **Microgeneration Certification Scheme (MCS)** approved PV panels and a MCS certified installer and both should carry the MCS mark.

It is noted that PV panel products can also be certificated under the Solar Keymark scheme and more information can be found at:

<http://www.estif.org/solarkeymark/productsandcertificates.php>

The MCS is an independent scheme that certifies PV panel products and installers in accordance with consistent standards. MCS evaluates PV panel products and installers against robust criteria providing greater protection for consumers by giving them a guarantee that related certified products and installers have conformed to a rigorous set of standards. MCS has support from the Department of Energy and Climate Change (DECC), industry and non-governmental groups as a prime method for making a substantial contribution to cutting the UK's dependency on fossil fuels and carbon dioxide emissions.

### MCS Certified PV Manufacturers

Downloaded from the renewable energy centre website
